LENGTH OF STAY BY DRG AND PAYMENT SOURCE

This volume is one of five books in the Length of Stay by DRG and Payment Source series:

Length of Stay by DRG and Payment Source, United States, 1988-89
Length of Stay by DRG and Payment Source, Northeastern Region, 1988-89
Length of Stay by DRG and Payment Source, North Central Region, 1988-89
Length of Stay by DRG and Payment Source, Southern Region, 1988-89
Length of Stay by DRG and Payment Source, Western Region, 1988-89

Length of Stay data have been published annually since 1963. In addition to Length of Stay by DRG and Payment Source, other volumes in the Cost Containment Series are:

Length of Stay by Diagnosis and Operation
Length of Stay by Psychiatric Diagnosis
(Available for the United States, Northeastern, North Central, Southern, and Western regions)

Pediatric Length of Stay by Diagnosis and Operation
Geriatric Length of Stay by Diagnosis and Operation
(Available for the United States only)

PREFACE

One of several divisions of TSM Computing Group, the newly established Healthcare Knowledge Systems (HKS) markets a line of high quality, information-oriented products and services to the healthcare industry and related fields. HKS is the official marketer and distributor of products derived from the clinical research and classification development of the Commission on Professional and Hospital Activities (CPHA).

HKS Publications offers a range of information products, available through books, magnetic media and educational seminars. The Length of Stay by DRG and Payment Source series is one of a number of data reference tools setting performance guidelines for a variety of healthcare settings.

These statistics provide a valuable perspective for utilization review and quality assurance professionals, physicians, consultants, hospital administrators, third party payors, employers, and healthcare researchers interested in cost containment and quality of care.

INTRODUCTION

The Length of Stay by DRG and Payment Source series has been designed as a companion to the standard reference, LOS by Diagnosis and Operation, to provide length of stay data by another patient classification system. Similar to the Diagnosis and Operation series, this five volume set is designed to assist the healthcare professional in utilization review and other cost containment and evaluation activities.

Notable differences between the Length of Stay by DRG and Payment Source series and the Length of Stay by Diagnosis and Operation series are primarily with the data source. Data used for the Length of Stay by DRG and Payment Source series have been projected to the universe of short-term, nonfederal general hospitals based on patient records from 570 hospitals. A detailed description of the projection methodology is given on page viii. It is important to keep in mind that the numbers and calculations in the Length of Stay by DRG and Payment source represent projections rather than actual numbers.

Additionally, the Length of Stay by DRG and Payment Source series adds power by providing length of stay by the following four principal payment sources: Medicare, Medicaid, Private Insurance, and No Insurance. This allows for comparison of length of stay by clinical condition and patient age among the major healthcare reimbursement systems.

DESCRIPTION OF THE DATABASE

Source of the Data

Data in the Length of Stay by DRG and Payment Source tables were compiled from individual patient discharge records submitted by hospitals participating in the Professional Activity Study (PAS). In addition, discharge data from hospitals participating in information systems other than PAS are included.

The following steps describe the PAS method of storing and retrieving medical data:

1. In each participating hospital, personnel transfer data from the medical record of each discharged patient into the PAS System via PAS+ microcomputer, magnetic tape, or PAS Case Abstract.
2. The disk, tape, or abstract is mailed to the center of PAS operations in Ann Arbor, Michigan, where it is entered into the computer system.
3. Data undergo a comprehensive editing process and errors are corrected.
4. The computer system continually adds data to a permanent file. Participating hospitals are provided access to these data through interactive systems, in-house computers, and reports. The stored data are also available to researchers on a contractual basis.
5. Data are standardized to create an aggregated patient record base.

Annually these data are utilized to create the Length of Stay by DRG and Payment Source series and other reference tools.

Data Quality

Data quality is a primary concern. Although the hospital has basic responsibility for the quality of PAS data, considerable effort is exerted to prevent and correct errors. Over 600 computer checks are performed during the processing of each record to ensure the reasonableness of the data. Examples of discrepancies detected by the audit are: hospital day of operative episode exceeding total stay, cesarean section with a normal delivery diagnosis, sex-specific diagnosis or operation with the wrong sex recorded, incalculable age or stay, unrecorded or invalid diagnosis. When illogical, invalid, or missing data are detected, about 40 percent of the errors are corrected by computer. The remainder are referred back to hospital staff through computer-generated error messages.

In addition to initial data editing, the computer system that produces the length of stay tables does numerous edits to eliminate uncorrected or unusual data. The following events cause a record to be excluded as not representing a typical short-term patient:

1. death, stillborn
2. admission from other short-term hospital
3. discharge to other short-term hospital
4. discharge against medical advice

Database Characteristics

Data chosen for inclusion in the Length of Stay by DRG and Payment Source series are from general, nonfederal, short-term hospitals in the United States with twelve complete months of discharge data beginning July 1, 1988. Short-term hospitals are defined as those in which the median stay is less than 30 days. General hospitals provide patient services for a variety of medical conditions. Data from long-term specialty institutions, e.g., long-term psychiatric or rehabilitation facilities, are excluded.

The characteristics of all hospitals with discharge data included in the books are displayed in the table below. The hospital universe is based on facility and discharge records collected for the 1987 Annual Survey of Hospitals of the American Hospital Association (AHA).

[1] Urban hospitals are those with a metropolitan statistical area designation on the AHA Annual Survey of Hospitals. Hospitals without a metropolitan statistical area designation represent rural hospitals.

[2] The teaching designation is determined by a weighted index measuring program intensity developed by Phillip and Hai.

Projecting to the Universe

To make the LOS by DRG and Payment Source sample reflect the activity of U.S. nonfederal, short-term general hospitals the following steps are taken:

Step 1 - Stratification

First, the 570 hospitals are stratified by factors known to affect inpatient utilization. The two factors used are:

1. **Program Intensity** is determined by a weighted index measuring program intensity created by Phillip and Hai[1]. The index is based on programs, memberships, and affiliations approved by various bodies. The approvals incorporated in the index are:

   - Accreditation by the Joint Commission on Accreditation of Healthcare Organizations (JCA)
   - Cancer Program approved by the American College of Surgeons (CP)
   - Residency approved by the American Medical Association (RES)
   - Medical School Affiliation reported by the American Medical Association (MS)
   - Hospital-controlled professional nursing school, reported by the National League for Nursing (PNS)
   - Member of the Council of Teaching Hospitals of the Association of American Medical Colleges (COT)

Based on this index, hospitals are classified by one of three teaching status groups:

- Nonteaching Institution
- Minor Teaching Institution
- Major Teaching Institution

The statistical formula is:

$$1p = 9.9\,(JCA) + 14.0(CP) + 28.0(RES) + 14.7(MS) + 13.3(PNS) + 20.1(COT)$$

The numerical values in the formula are weights that have been assigned to each of the approvals incorporated in the index.

For the Length of Stay by DRG and Payment Source series the following cut-offs are used to stratify hospitals by teaching status:

Ip value under 25.0	Nonteaching Institution
Ip value 25.0+	Teaching Institution

2. **Census Division** places the 50 states and the District of Columbia into nine geographical areas defined by the U.S. Department of Commerce, Bureau of the Census. These nine divisions and their corresponding regions are:

Region	Division
Northeast	New England Mid Atlantic
North Central	East North Central West North Central
South	South Atlantic East South Central West South Central
West	Mountain Pacific

Step 2 - Projection

A matrix is constructed which identifies the number of actual discharges from hospitals by program intensity (nonteaching and teaching) and geographical region (Northeast, North Central, West, South). A projection factor is calculated for each cell within the matrix. This factor is calculated as follows:

$$\text{Projection Factor} = \frac{\text{Total discharges from the universe}}{\text{Number of actual discharges}}$$

Each projection factor is multiplied by the number of actual discharges in a particular cell. The resulting numbers represent estimated patient discharges, the sum of which approximates total July 1988 to June 1989 discharges from the U.S. nonfederal, short-term general hospital universe.

ORGANIZATION OF THE TABLES

The Length of Stay by DRG and Payment Source series is divided into separate volumes by geographic region. There are five volumes: Northeastern, North Central, Southern, Western, and the United States. The map below defines each of the 4 census regions. Appendix 1 lists the states comprising each region.

Length of Stay by DRG and Payment Source Patient Variables

The length of stay data are stratified by DRG, principal payment source, presence or absence of complications and comorbidities (CCs), and by age ranges.

Diagnosis Related Groups (DRGs)

There are 477 DRGs in the 1988-89 LOS by DRG and Payment Source series. These DRGs are based on the sixth revision, effective October 1, 1989. Appendix 2 provides a listing of all DRGs for the sixth revision.

Some DRGs have been excluded because they include invalid, ungroupable, or inappropriate categories for examining length of stay. The excluded DRGs are:

DRG Number	English Description
123	Circulatory Disorders w/AMI, Expired
385	Neonates, Died or Transferred to Another Acute Care Facility
433	Alcohol/Drug Abuse or Dependence , Left Against Medical Advice
438	(No longer valid)
456	Burns, Transferred to Another Acute Care Facility
467	Other Factors Influencing Health Status
468, 476, 477	Unrelated Operating Room Procedures
469	Principal Diagnosis Invalid as Discharge Diagnosis
470	Ungroupable

In the 1988-89 LOS by DRG and Payment Source series a table is not created for the excluded DRGs listed above. Additionally, new procedure codes were added 10/1/89 for grouping to DRGs 436 and 437 (Alcohol and Drug Dependence with Rehab and with Rehab and Detox). The patient records used in this book represent

discharges prior to the addition of these new codes, and therefore do not contain the procedure codes anticipated to group to these DRGs. As a result, no patient records have been grouped to DRGs 436 and 437.

Expected Principal Payment Source

For each DRG, there are four tables corresponding to one of four expected principal payment sources.

1. Medicare
2. Blue Cross/Blue Shield and Private Insurance
3. Medicaid
4. No Insurance

The 'No Insurance' category represents a collapsing of the following payment categories from the PAS abstract: 'Self Pay', 'Other', and 'No Charge'. These three payment categories have not been used consistently by all hospitals contributing data, and therefore this category should be interpreted with some caution.

Presence or Absence of Complications and Comorbidities (CCs)

To determine the presence of complications or comorbidities (CCs), a patient's secondary diagnoses are compared to those specific ICD-9-CM diagnosis codes defined by the Health Care Financing Administration (HCFA) as CCs.

HCFA definitions are:

- A complication is a condition that arises during the hospital stay that prolongs length of stay by at least one day in approximately 75 percent of the cases.
- A comorbidity is a pre-existing condition that will, because of its presence with a specific diagnosis, cause an increase in length of stay by at least one day in approximately 75 percent of the cases.

Determination of the existence of CCs corresponds to the DRG version effective October 1, 1989.

Patient Age and/or Birth Weight

Patient discharges in the Medicare payment source category are in one of the following age groups, recorded in years:

0 - 69
70 - 74
75 - 79
80 - 84
85+

The other three payment source age groups are collapsed as follows:

0 - 17
18 - 34
35 - 49
50 - 69
70+

For DRGs 386 - 391, which classify neonates, the age range is replaced by a birth weight range, recorded in grams. The categories are as follows:

1 - 999
1000 - 1499
1500 - 1749
1750 - 2499
2500 +

All discharge records for newborns and neonates without a birth weight have been excluded.

EXPLANATION OF THE STATISTICS

The statistics are displayed by total number of patients, average length of stay, variance, and distribution percentiles. In addition, two subtotals and a grand total are included. Since the LOS by DRG and Payment Source series is drawn from patient discharges from 570 hospitals and then projected to the universe of U.S. hospitals, *the numbers and calculations represent projections rather than actual numbers.*

Since the LOS by DRG and Payment Source series is drawn from discharges that have been projected to the universe of U.S. hospitals, one actual patient discharge represents multiple projected patients. The average projection factor is 10.5.

If the total number of patients listed is based on five or fewer *actual* discharges, the percentile distribution columns are left blank.

Total Number of Patients

This number represents the total number of projected patients in the stratified group.

Average Length of Stay

The length of stay is calculated from the admission and discharge dates by counting the day of admission as the first day. The average is figured by adding the lengths of stay for all projected patients and then dividing by the total number of projected patients. Patients discharged on the day of admission are counted as staying one day in the calculation of average length of stay.

Variance

The variance is a measure of the spread of the data around the average. For the LOS by DRG and Payment Source tables, the smallest variance is zero, indicating all lengths of stay are equal.

When using tables in which there is a large variance, and the projected patient group size is relatively small, the average stay may appear high. This sometimes occurs when one or two patients with long hospitalizations fall into the group.

Distribution Percentiles

A length of stay percentile for a stratified group of projected patients is determined by arranging the projected patient stays from low to high. Counting up from the lowest stay to the point where half of the projected patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total projected patients gives the 10th percentile, and so on.

The 10th, 25th, 50th, 75th. 90th, and 95th percentiles of stay are displayed in days. If, for example, the 25th percentile for a group of projected patients is four, it means 25 percent of the projected patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+. Patients who were hospitalized 99+ days or longer are not included in the total patients, average stay, and variance categories. The percentiles, however, do include these patients.

Subtotal and Grand Total

The subtotal represents the total projected patients in one of the two complication and comorbidity groups. The Grand Total represents the total number of projected patients in the DRG and Payment Source categories. In cases where a total is off by one patient, it is the result of rounding the projections.

USING THE TABLES

The Length of Stay by DRG and Payment Source series can be used as a valuable supplement and reference in a variety of healthcare settings. Use of stay data as an inpatient utilization measure allows the healthcare professional to compare regional and national norms to an individual institution or special population.

For this reason, the LOS by DRG and Payment Source series share most applications of the present LOS by Diagnosis and Operation and the Psychiatric LOS series. Among them:

- projecting extended stay reviews;
- identifying candidates for utilization review;
- establishing baselines;
- developing forecasts; and
- service planning.

The following steps are intended to provide a guide in situations where a healthcare professional wishes to determine a reasonable length of stay by using one of the Length of Stay by DRG and Payment Source regional or national volumes:

Step 1: Consult Appendix 2 of the appropriate Length of Stay by DRG and Payment Source book for the particular DRG to be reviewed.

Step 2: Find the corresponding table in the Length of Stay by DRG and Payment Source book.

Step 3: Depending on the purpose of the review, find the appropriate table category:

Payment Source
Complication/Comorbidity Status
Age Group

Step 4: Go to the 50th percentile of stay for patients under review at the point where the 50th percentile column of the table intersects the horizontal line labeling the pertinent patient variables and find the number of days.

Step 5: Consult the total stratified patient sample (Grand Total) and its variance to consider the homogeneity of the data, i.e., to what extent length of stay averages are clustered or spread out within a particular patient group.

The differences between the Length of Stay by DRG and Payment Source and the other LOS series make it an important new contribution to the array of quantitative measures that assist healthcare professionals in evaluating cost containment and quality assurance programs for institutions or special populations.

While the LOS by Diagnosis and Operation series offers a diagnosis and procedure-specific profile of inpatient utilization, and the Psychiatric LOS series provides the same for a special population, the LOS by DRG and Payment Source series describes the impact of financing mechanisms through highlighting the four payment source categories. Simultaneously, it takes into account other patient attributes, such as complication and comorbidity status, that may affect length of stay, thereby reporting DRG length of stay patterns in U.S. nonfederal, short-term general hospitals.

Finally, increasing concern about costs and quality care, paired with the need for more sophisticated and accountable performance measures to conduct these cost and quality reviews, make the Length of Stay by DRG and Payment Source tables an accessible, convenient, and essential tool for the healthcare industry.

LENGTH OF STAY BY DRG AND PAYMENT SOURCE

This volume is one of five books in the Length of Stay by DRG and Payment Source series:

Length of Stay by DRG and Payment Source, United States, 1988-89
Length of Stay by DRG and Payment Source, Northeastern Region, 1988-89
Length of Stay by DRG and Payment Source, North Central Region, 1988-89
Length of Stay by DRG and Payment Source, Southern Region, 1988-89
Length of Stay by DRG and Payment Source, Western Region, 1988-89

Length of Stay data have been published annually since 1963. In addition to Length of Stay by DRG and Payment Source, other volumes in the Cost Containment Series are:

Length of Stay by Diagnosis and Operation
Length of Stay by Psychiatric Diagnosis
(Available for the United States, Northeastern, North Central, Southern, and Western regions)

Pediatric Length of Stay by Diagnosis and Operation
Geriatric Length of Stay by Diagnosis and Operation
(Available for the United States only)

PREFACE

One of several divisions of TSM Computing Group, the newly established Healthcare Knowledge Systems (HKS) markets a line of high quality, information-oriented products and services to the healthcare industry and related fields. HKS is the official marketer and distributor of products derived from the clinical research and classification development of the Commission on Professional and Hospital Activities (CPHA).

HKS Publications offers a range of information products, available through books, magnetic media and educational seminars. The Length of Stay by DRG and Payment Source series is one of a number of data reference tools setting performance guidelines for a variety of healthcare settings.

These statistics provide a valuable perspective for utilization review and quality assurance professionals, physicians, consultants, hospital administrators, third party payors, employers, and healthcare researchers interested in cost containment and quality of care.

INTRODUCTION

The Length of Stay by DRG and Payment Source series has been designed as a companion to the standard reference, LOS by Diagnosis and Operation, to provide length of stay data by another patient classification system. Similar to the Diagnosis and Operation series, this five volume set is designed to assist the healthcare professional in utilization review and other cost containment and evaluation activities.

Notable differences between the Length of Stay by DRG and Payment Source series and the Length of Stay by Diagnosis and Operation series are primarily with the data source. Data used for the Length of Stay by DRG and Payment Source series have been projected to the universe of short-term, nonfederal general hospitals based on patient records from 570 hospitals. A detailed description of the projection methodology is given on page viii. It is important to keep in mind that the numbers and calculations in the Length of Stay by DRG and Payment source represent projections rather than actual numbers.

Additionally, the Length of Stay by DRG and Payment Source series adds power by providing length of stay by the following four principal payment sources: Medicare, Medicaid, Private Insurance, and No Insurance. This allows for comparison of length of stay by clinical condition and patient age among the major healthcare reimbursement systems.

DESCRIPTION OF THE DATABASE

Source of the Data

Data in the Length of Stay by DRG and Payment Source tables were compiled from individual patient discharge records submitted by hospitals participating in the Professional Activity Study (PAS). In addition, discharge data from hospitals participating in information systems other than PAS are included.

The following steps describe the PAS method of storing and retrieving medical data:

1. In each participating hospital, personnel transfer data from the medical record of each discharged patient into the PAS System via PAS+ microcomputer, magnetic tape, or PAS Case Abstract.
2. The disk, tape, or abstract is mailed to the center of PAS operations in Ann Arbor, Michigan, where it is entered into the computer system.
3. Data undergo a comprehensive editing process and errors are corrected.
4. The computer system continually adds data to a permanent file. Participating hospitals are provided access to these data through interactive systems, in-house computers, and reports. The stored data are also available to researchers on a contractual basis.
5. Data are standardized to create an aggregated patient record base.

Annually these data are utilized to create the Length of Stay by DRG and Payment Source series and other reference tools.

Data Quality

Data quality is a primary concern. Although the hospital has basic responsibility for the quality of PAS data, considerable effort is exerted to prevent and correct errors. Over 600 computer checks are performed during the processing of each record to ensure the reasonableness of the data. Examples of discrepancies detected by the audit are: hospital day of operative episode exceeding total stay, cesarean section with a normal delivery diagnosis, sex-specific diagnosis or operation with the wrong sex recorded, incalculable age or stay, unrecorded or invalid diagnosis. When illogical, invalid, or missing data are detected, about 40 percent of the errors are corrected by computer. The remainder are referred back to hospital staff through computer-generated error messages.

In addition to initial data editing, the computer system that produces the length of stay tables does numerous edits to eliminate uncorrected or unusual data. The following events cause a record to be excluded as not representing a typical short-term patient:

1. death, stillborn
2. admission from other short-term hospital
3. discharge to other short-term hospital
4. discharge against medical advice

Database Characteristics

Data chosen for inclusion in the Length of Stay by DRG and Payment Source series are from general, nonfederal, short-term hospitals in the United States with twelve complete months of discharge data beginning July 1, 1988. Short-term hospitals are defined as those in which the median stay is less than 30 days. General hospitals provide patient services for a variety of medical conditions. Data from long-term specialty institutions, e.g., long-term psychiatric or rehabilitation facilities, are excluded.

The characteristics of all hospitals with discharge data included in the books are displayed in the table below. The hospital universe is based on facility and discharge records collected for the 1987 Annual Survey of Hospitals of the American Hospital Association (AHA).

1988-89 Length of Stay by DRG and Payment Source
Sample Hospital Characteristics

	Universe	LOS by DRG Sample
Total Number of Hospitals	5512	570
Northeastern	786	150
North Central	1609	181
Southern	2089	104
Western	1028	135
Number of Urban[1] Hospitals	2893	284
Number of High/Medium Teaching Intensity[2] Hospitals	925	122

---

1. Urban hospitals are those with a metropolitan statistical area designation on the AHA Annual Survey of Hospitals. Hospitals without a metropolitan statistical area designation represent rural hospitals.
2. The teaching designation is determined by a weighted index measuring program intensity developed by Phillip and Hai.

Projecting to the Universe

To make the LOS by DRG and Payment Source sample reflect the activity of U.S. nonfederal, short-term general hospitals the following steps are taken:

Step 1 - Stratification

First, the 570 hospitals are stratified by factors known to affect inpatient utilization. The two factors used are:

1. **Program Intensity** is determined by a weighted index measuring program intensity created by Phillip and Hai[1]. The index is based on programs, memberships, and affiliations approved by various bodies. The approvals incorporated in the index are:

    - Accreditation by the Joint Commission on Accreditation of Healthcare Organizations (JCA)
    - Cancer Program approved by the American College of Surgeons (CP)
    - Residency approved by the American Medical Association (RES)
    - Medical School Affiliation reported by the American Medical Association (MS)
    - Hospital-controlled professional nursing school, reported by the National League for Nursing (PNS)
    - Member of the Council of Teaching Hospitals of the Association of American Medical Colleges (COT)

Based on this index, hospitals are classified by one of three teaching status groups:

- Nonteaching Institution
- Minor Teaching Institution
- Major Teaching Institution

The statistical formula is:

$$Ip = 9.9\,(JCA) + 14.0(CP) + 28.0(RES) + 14.7(MS) + 13.3(PNS) + 20.1(COT)$$

The numerical values in the formula are weights that have been assigned to each of the approvals incorporated in the index.

For the Length of Stay by DRG and Payment Source series the following cut-offs are used to stratify hospitals by teaching status:

Ip value under 25.0	Nonteaching Institution
Ip value 25.0+	Teaching Institution

---

[1] Phillip P., J., and Hai, Abdul. *An Index of Programs for Hospitals*, American Hospital Association. Chicago, Illinois, 1976.

2. **Census Division** places the 50 states and the District of Columbia into nine geographical areas defined by the U.S. Department of Commerce, Bureau of the Census. These nine divisions and their corresponding regions are:

Region	Division
Northeast	New England Mid Atlantic
North Central	East North Central West North Central
South	South Atlantic East South Central West South Central
West	Mountain Pacific

Step 2 - Projection

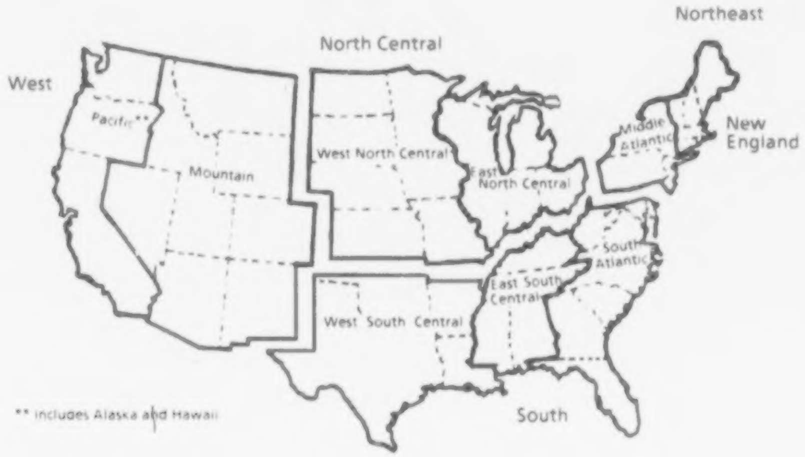
A matrix is constructed which identifies the number of actual discharges from hospitals by program intensity (nonteaching and teaching) and geographical region (Northeast, North Central, West, South). A projection factor is calculated for each cell within the matrix. This factor is calculated as follows:

$$\text{Projection Factor} = \frac{\text{Total discharges from the universe}}{\text{Number of actual discharges}}$$

Each projection factor is multiplied by the number of actual discharges in a particular cell. The resulting numbers represent estimated patient discharges, the sum of which approximates total July 1988 to June 1989 discharges from the U.S. nonfederal, short-term general hospital universe.

ORGANIZATION OF THE TABLES

The Length of Stay by DRG and Payment Source series is divided into separate volumes by geographic region. There are five volumes: Northeastern, North Central, Southern, Western, and the United States. The map below defines each of the 4 census regions. Appendix 1 lists the states comprising each region.



Northeast
North Central

Length of Stay by DRG and Payment Source Patient Variables

The length of stay data are stratified by DRG, principal payment source, presence or absence of complications and comorbidities (CCs), and by age ranges.

Diagnosis Related Groups (DRGs)

There are 477 DRGs in the 1988-89 LOS by DRG and Payment Source series. These DRGs are based on the sixth revision, effective October 1, 1989. Appendix 2 provides a listing of all DRGs for the sixth revision.

Some DRGs have been excluded because they include invalid, ungroupable, or inappropriate categories for examining length of stay. The excluded DRGs are:

DRG Number	English Description
123	Circulatory Disorders w/AMI, Expired
385	Neonates, Died or Transferred to Another Acute Care Facility
433	Alcohol/Drug Abuse or Dependence , Left Against Medical Advice
438	(No longer valid)
456	Burns, Transferred to Another Acute Care Facility
467	Other Factors Influencing Health Status
468, 476, 477	Unrelated Operating Room Procedures
469	Principal Diagnosis Invalid as Discharge Diagnosis
470	Ungroupable

In the 1988-89 LOS by DRG and Payment Source series a table is not created for the excluded DRGs listed above. Additionally, new procedure codes were added 10/1/89 for grouping to DRGs 436 and 437 (Alcohol and Drug Dependence with Rehab and with Rehab and Detox). The patient records used in this book represent

discharges prior to the addition of these new codes, and therefore do not contain the procedure codes anticipated to group to these DRGs. As a result, no patient records have been grouped to DRGs 436 and 437.

Expected Principal Payment Source

For each DRG, there are four tables corresponding to one of four expected principal payment sources.

1. Medicare
2. Blue Cross/Blue Shield and Private Insurance
3. Medicaid
4. No Insurance

The 'No Insurance' category represents a collapsing of the following payment categories from the PAS abstract: 'Self Pay', 'Other', and 'No Charge'. These three payment categories have not been used consistently by all hospitals contributing data, and therefore this category should be interpreted with some caution.

Presence or Absence of Complications and Comorbidities (CCs)

To determine the presence of complications or comorbidities (CCs), a patient's secondary diagnoses are compared to those specific ICD-9-CM diagnosis codes defined by the Health Care Financing Administration (HCFA) as CCs.

HCFA definitions are:

- A complication is a condition that arises during the hospital stay that prolongs length of stay by at least one day in approximately 75 percent of the cases.
- A comorbidity is a pre-existing condition that will, because of its presence with a specific diagnosis, cause an increase in length of stay by at least one day in approximately 75 percent of the cases.

Determination of the existence of CCs corresponds to the DRG version effective October 1, 1989.

Patient Age and/or Birth Weight

Patient discharges in the Medicare payment source category are in one of the following age groups, recorded in years:

0 - 69
70 - 74
75 - 79
80 - 84
85+

The other three payment source age groups are collapsed as follows:

0 - 17
18 - 34
35 - 49
50 - 69
70+

For DRGs 386 - 391, which classify neonates, the age range is replaced by a birth weight range, recorded in grams. The categories are as follows:

1 - 999
1000 - 1499
1500 - 1749
1750 - 2499
2500 +

All discharge records for newborns and neonates without a birth weight have been excluded.

EXPLANATION OF THE STATISTICS

The statistics are displayed by total number of patients, average length of stay, variance, and distribution percentiles. In addition, two subtotals and a grand total are included. Since the LOS by DRG and Payment Source series is drawn from patient discharges from 570 hospitals and then projected to the universe of U.S. hospitals, *the numbers and calculations represent projections rather than actual numbers.*

Since the LOS by DRG and Payment Source series is drawn from discharges that have been projected to the universe of U.S. hospitals, one actual patient discharge represents multiple projected patients. The average projection factor is 10.5.

If the total number of patients listed is based on five or fewer *actual* discharges, the percentile distribution columns are left blank.

Total Number of Patients

This number represents the total number of projected patients in the stratified group.

Average Length of Stay

The length of stay is calculated from the admission and discharge dates by counting the day of admission as the first day. The average is figured by adding the lengths of stay for all projected patients and then dividing by the total number of projected patients. Patients discharged on the day of admission are counted as staying one day in the calculation of average length of stay.

Variance

The variance is a measure of the spread of the data around the average. For the LOS by DRG and Payment Source tables, the smallest variance is zero, indicating all lengths of stay are equal.

When using tables in which there is a large variance, and the projected patient group size is relatively small, the average stay may appear high. This sometimes occurs when one or two patients with long hospitalizations fall into the group

Distribution Percentiles

A length of stay percentile for a stratified group of projected patients is determined by arranging the projected patient stays from low to high. Counting up from the lowest stay to the point where half of the projected patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total projected patients gives the 10th percentile, and so on.

The 10th, 25th, 50th, 75th, 90th, and 95th percentiles of stay are displayed in days. If, for example, the 25th percentile for a group of projected patients is four, it means 25 percent of the projected patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+. Patients who were hospitalized 99+ days or longer are not included in the total patients, average stay, and variance categories. The percentiles, however, do include these patients.

Subtotal and Grand Total

The subtotal represents the total projected patients in one of the two complication and comorbidity groups. The Grand Total represents the total number of projected patients in the DRG and Payment Source categories. In cases where a total is off by one patient, it is the result of rounding the projections.

USING THE TABLES

The Length of Stay by DRG and Payment Source series can be used as a valuable supplement and reference in a variety of healthcare settings. Use of stay data as an inpatient utilization measure allows the healthcare professional to compare regional and national norms to an individual institution or special population.

For this reason, the LOS by DRG and Payment Source series share most applications of the present LOS by Diagnosis and Operation and the Psychiatric LOS series. Among them:

- projecting extended stay reviews;
- identifying candidates for utilization review;
- establishing baselines;
- developing forecasts; and
- service planning.

The following steps are intended to provide a guide in situations where a healthcare professional wishes to determine a reasonable length of stay by using one of the Length of Stay by DRG and Payment Source regional or national volumes:

Step 1: Consult Appendix 2 of the appropriate Length of Stay by DRG and Payment Source book for the particular DRG to be reviewed.

Step 2: Find the corresponding table in the Length of Stay by DRG and Payment Source book.

Step 3: Depending on the purpose of the review, find the appropriate table category:

Payment Source
Complication/Comorbidity Status
Age Group

Step 4: Go to the 50th percentile of stay for patients under review at the point where the 50th percentile column of the table intersects the horizontal line labeling the pertinent patient variables and find the number of days.

Step 5: Consult the total stratified patient sample (Grand Total) and its variance to consider the homogeneity of the data, i.e., to what extent length of stay averages are clustered or spread out within a particular patient group.

The differences between the Length of Stay by DRG and Payment Source and the other LOS series make it an important new contribution to the array of quantitative measures that assist healthcare professionals in evaluating cost containment and quality assurance programs for institutions or special populations.

While the LOS by Diagnosis and Operation series offers a diagnosis and procedure-specific profile of inpatient utilization, and the Psychiatric LOS series provides the same for a special population, the LOS by DRG and Payment Source series describes the impact of financing mechanisms through highlighting the four payment source categories. Simultaneously, it takes into account other patient attributes, such as complication and comorbidity status, that may affect length of stay, thereby reporting DRG length of stay patterns in U.S. nonfederal, short-term general hospitals.

Finally, increasing concern about costs and quality care, paired with the need for more sophisticated and accountable performance measures to conduct these cost and quality reviews, make the Length of Stay by DRG and Payment Source tables an accessible, convenient, and essential tool for the healthcare industry.
